The invention relates to an isolated Chlamydia species high molecular weight (HMW) protein having an apparent mol. wt. of 105-115 kD as determined by 5DS-PAGE. The HWW proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, lymphogranuloma venereum (FGV), salpingitis, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and diagnosis. The present sequence

The present invention relates to a new gram-negative bacterial bleb presenting on its surface the PorB outer membrane protein from Chlamydia trachomatis, or a protective antigen from C. pneumoniae. The invention is useful for preventing C. trachomatis or C. pneumoniae infection in a host. The present nucleic acid sequence represents a Chlamydia trachomatis gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel gram-negative bacterial bleb presenting on its surface ForB outer membrane protein from Chlamydia trachomatis or protective antigen from Chlamydia pneumoniae, useful for preventing Chlamydia infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               VAGVRGGGIAAVQDGQQGVSSTSTEDPVVSFSRNTAVEFDGNVARVGGGIYSYGNVAFL

invention.

The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide equences given in the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament or the treatment or prevention of infection due to Chlamydia trachomatis. The infection is treated or prevented by the medicament electing an immune response which is specific to a C. trachomatis clementary body, or for neutralising C. trachomatis elementary bodies, chence the immunogenic composition can be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can be used for the immunogenic compositions compositions acivity. This sequence represents one of the 131 C. trachomatis proteins with immunogenic properties of the

New immunogenic composition having a protein or encoding nucleic acid, useful for diagnosing, preventing and/or treating Chlamydia trachomatis

Compositions are described an adjuvant, where the protein or nucleic acid, and an adjuvant, where the protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide sequences given in the specification, or has 50% or greater sequence (C identity to it, or their fragments. The protein and/or nucleic acid of the immunogenit composition is useful in the manufacture of a medicament for the treatment or prevention of infection due to Chlamydia (C itachomatis. The infection is treated or prevented by the medicament cellciting an immune response which is specific to a C. trachomatis (C eliciting an immune response which is specific to a C. trachomatis (C elementary body, or for neutralising C. trachomatis elementary bodies, hence the immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can be used for the immunogenic compositions can be used for the immunogenic compositions can be used for the immunogenic compositions and also be used for the immunogenic compositions compositions and the immunogenic compositions have antibacterial activity. This sequence represents one of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        720 RSAHSAIQASVDGRSYCRGLMVSGVSNFFYHDRDALGQGYRYISGGYSLGANSYFGSSMF 779

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid, and an adjuvant, where the protein or nucleic acid acid comprises any of 131 fully defined amino acid or nucleotide acid comprises any of 131 fully defined amino acid or nucleotide acid of acid comprises given in the specification, or has 50% or greater sequence demanaged composition is useful in the manufacture of a medicament or the treatment or prevention of infection due to Chlamydia trachomatis. The infection is treated or prevented by the medicament close the infection is treated or prevented by the medicament close included an immune response which is specific to a C trachomatis elementary body, or for neutralising C trachomatis elementary bodies, hence the immunogenic compositions can also be used for the diagnosis of C. immunogenic compositions an also be used for the immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions compositions have antibacterial activity. This sequence represents one of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid, and an adjuvant, where the protein or nucleic acid cand comprises any of 131 fully defined amino acid or nucleotide acid of the acid of the acid of the acid of the acid of the acid of the acid of the acid of the acid of the acid of the acid of the acid of the acid of the acid of the acid of the acid of the trachment or prevention of infection due to Chlamydia trachomatis. The infection is trachomated by the medicament are acid of trachomatis and immune response which is specific to a C. trachomatis elementary body, or for neutralising C. trachomates acid of the immunogenic composition can be used in creating a vaccine. The immunogenic composition can be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions can be used to treat disorders by gene therapy. This sequence represents one of the infinite acid of the immunogenic compositions with immunogenic properties of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide acid comprises any of 131 fully defined amino acid or nucleotide acid or the interpretation of has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament of the immunogenic composition is treated or prevented by the medicament trachomatis. The infection is treated or prevented by the medicament compositions which is specific to a C. trachomatis acid elementary bodies, hence the immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can also be used for the immunogenic compositions can be used dor the immunogenic compositions can be used dor the immunogenic compositions can be used acid for the immunogenic compositions have antibacterial activity. This sequence represents one of the 131 C. trachomatis proteins with immunogenic properties of the

                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                          The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleocide sequences given in the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament or the treatment or prevention of infection due to Chlamydia trachomatis. The infection is treated or prevented by the medicament eliciting an immune response which is specific to a C. trachomatis elementary body, or for neutralishing C. trachomatis alementary bodies, hance the immunogenic composition can be used in creating a vaccine. The immunogenic composition can be used in creating a vaccine. The immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions compositions are the immunogenic compositions compositions are antibacterial activity. This sequence represents one of the interpretates of the immunogenic compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     ğ

acid comprises any of 131 fully defined amino acid or nucleotide sequences given in the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament for the treatment or prevention of infection due to Chlamydia trachomatis. The infection is treated or prevented by the medicament eliciting an immune response which is specific to a C. trachomatis elementary body, or for neutralising C. trachomatis elementary body or for neutralising C. trachomatis elementary bodies, hence the immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can also be used for the diagnosis of compositions can be used to trach diagnosis of compositions have antibacterial activity. This sequence represents one of the 131 C. trachomatis proteins with immunogenic properties of the

The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide sequences given in the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament trachomatis. The infection is treated or prevented by the medicament trachomatis. The infection is treated or prevented by the medicament of infection is treated or prevented by the medicament of infection is treated or prevented by the medicament of infection is treated or prevented by the medicament of infection is treated or prevented by the medicament of infection is treated or prevented by the diagnosis of compositions can also be used for the diagnosis of composition. The nucleic acids of the immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions compositions have antibacterial activity. This sequence represents one of the inferminogenic compositions with immunogenic properties of the

The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide acid or nucleotide sequences given in the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament of or the treatment or prevention of infection due to Chlamydia trachomatis. The infection is treated or prevented by the medicament electricity an immune response which is specific to a C. trachomatis clementary body, or for neutralising C. trachomatis elementary bodies, hence the immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions compositions have antibacterial acitivity. This sequence represents one of the 131 C. trachomatis proteins with immunogenic properties of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SAGELTIKNIDNSIAALPISCFGNILGSFTVIGRGHSLTFENIRTSTNGALSDSANSG1 120

This invention relates to novel immunogenic compositions that comprise a combination of Chlamydia trachomatis (C. trachomatis) antigens. Specifically, it refers to a first antigen group consisting of Peph, LCTE, ArtLy, DnaK and CT198 and a second antigen group consisting of Peph, LCTE, ArtLy, DnaK and CT198, OmpH-like, LJ/L12, OmcA, AtoS, CT547, Enclase, HtrA and MurG. The present invention describes the development of a vaccine and antibodies that recognize the immunogenic composition in a order to provide a method of neutralizing a C. trachomatis infection in a mammal through raising an immune response. Accordingly, the phramaceutical compositions derived thereof exhibit antibacterial activity and the group of antigenic DNA sequences can also be used in antigen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

                                                                                                                                                           The invention comprises an immunogenic composition for the treatment prevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful sequence represents a Chlamydial infection. The present amino acid sequence represents a Chlamydial infection. The present amino acid sequence represents a Chlamydial incompassion of the invention. NoTE: The present sequence is not shown in the specification, but was sequence uspto.gov/sequence.html?DocID=20050106162.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention comprises an immunogenic composition for the treatment c prevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful treating or preventing chlamydial infection. The present amino acid sequence represents a chlamydia trachomatis protein of the invention. NoTE: The present sequence is not shown in the specification, but was obtained from the USPTO website - sequence.html?DocID=20050106162.

The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful treating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydia trachomatis protein of the invention. NOTE: The present sequence is not shown in the specification, but was sequence to the USPTO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MQTSFHKFPLSMILAYSCCSLNGGGYAAEIMVPQGIYDGETLIVSFPYTVIGDPSGTTVF

The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful treating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydial trachomatis protein of the invention.

                                                                                                                                                                                                                                          The invention comprises an immunogenic composition for the treatment prevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful treating or preventing chlamydial infection. The present amino acid sequence represents a chlamydia trachomatis protein of the invention. NoTE: The present sequence is not shown in the specification, but was obtained from the USPTO website - sequence.html?DocID=20050106162.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises an immunogenic composition for the treatment of prevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful treating or preventing chlamydial infection. The present amino acid sequence represente a Chlamydial infection. The present amino acid sequence represente a Chlamydial includation in the specification, but was obtained from the USPTO website - sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MQTSFHKFFLSMILAYSCCSLNGGGYAABIMVPQGIYDGETLTVSFPYTVIGDPSGTTVF

                                                                                                                                                                                                                                                                                                                The invention comprises an immunogenic composition for the treatment of prevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful freating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydia trachomatis protein of the invention. NOTE: The present sequence is not shown in the specification, but was obtained from the USPTO website.
